

A close-up photograph of Slender Clubmoss (Selaginella selaginoides). The moss consists of numerous small, upright, club-shaped stems that are densely packed and have a vibrant green color. The stems are covered in fine, hair-like structures. Several thin, brown, needle-like structures, likely pine needles, are scattered across the moss, providing a point of comparison for its size. The background is a soft, out-of-focus green, suggesting a natural, moist habitat.

Slender Clubmoss
